

Treatment Works:  
Jackie Nitschke Center Intensive Outpatient Huber Treatment Program

### *Huber Center Treatment Program reduces number of repeat drunk driving offenses*

The Jackie Nitschke Center (JNC) treats more than 250 clients per year in residential and outpatient treatment. Named in honor of Jackie Nitschke, wife of Packer great Ray Nitschke, the mission of the Center is to provide a cost-effective and affordable alcohol and other drug treatment continuum of care in a home-like environment to adult clients and their family members from Brown and surrounding counties.

Since 2004, JNC has collaborated with the Brown County judges, jail personnel, and AODA Human Services staff, offering a free, six-week intensive outpatient program at the Huber Center, targeting inmates with multiple drunk driving offenses.

Though these offenders were regularly ordered to obtain alcohol assessments and attend treatment, judges continued to see the same faces back in court: untreated and re-offending. Longer jail sentences and higher files did not seem to be reducing offenses or motivating the defendants to seek treatment.

Because offenders often cited cost as a barrier to treatment, JNC agreed to offer a free treatment program to repeat offenders. The treatment is also available to inmates on electronic monitoring. Participants can also take part in a 16-week aftercare program, paying \$25 per week, along with mandatory weekly Alcoholics Anonymous meetings, which also are held at the Huber facility.

The response from Huber participants has been positive. "They're hearing favorable reports from other inmates who have attended, and some are volunteering to participate even if not court-ordered. They recognize that the program is free while they are on Huber," explains Labine, adding that the program has been so successful that Brown County officials are using the results to help establish a drug court.

Statistics for the program are impressive. In the period from December 2002 through June 2007, 284 people with a total of 960 driving while intoxicated convictions, about 3.3 per person, began the intensive out-patient treatment. A full 38 percent of them had never been in treatment despite having been court ordered to do so after each conviction and approximately two-thirds of the individuals were males. On average, 75.7 percent of the attendees completed the six-week intensive program and 48 percent completed both the initial and aftercare programs.

The program results suggest that more treatment not only reduces the likelihood that an individual will re-offend, but also reduces the severity of their re-offense. Specifically, the results show that longer time in treatment not only impacts the percentage of re-offenders (see Outcomes table) but also the severity of their re-offenses. Clients who complete IOP and aftercare programs are less likely to re-offend than clients who complete only IOP (15 vs. 19 percent) or fail to complete treatment (15 vs. 26 percent). Clients who complete

IOP are also less likely to re-offend than individuals who fail to complete treatment (19 vs. 26 percent).

Examining the legal history for re-offenders in each group provides more telling results:

The majority of the offenses for the 16 re-offenders who completed both aftercare and IOP were OWI or operating without a license (OAR) and the remaining offenses were of a less severe nature (e.g., writing a bad check or disorderly conduct).

Huber inmates who completed less treatment committed more severe repeat offenses. The legal history for Individuals completing only IOP included child support, bail jumping or criminal trespassing. Those who failed to complete any treatment re-offended for battery, child abuse, and drug possession as for well as bail jumping and disorderly conduct.

SUMMARY OF PROGRAM  
December 16, 2002 to June 25, 2007

From December 2002 through June 2007, 284 inmates started the evening outpatient treatment program that JNC offered at the Huber Center. This group of offenders had committed 960 total lifetime Operating While Intoxicated offenses. Thirty-eight percent of this group had never been in a substance abuse treatment program in the past.

**Outcomes: Minimum of One Year After Starting Treatment (2007 Data):**

	<b>Data collected on clients with start date prior to 6-25-06</b>	<b>Completed both intensive outpatient and aftercare at JNC</b>	<b>Completed intensive outpatient, but NOT aftercare at JNC</b>	<b>Failed to complete the intensive outpatient program</b>
Number of clients eligible	223	107	62	54
<b>Number who re-offended</b>	<b>42 (19 percent)</b>	<b>16 (15 percent)</b>	<b>12 (19 percent)</b>	<b>14 (26 percent)</b>
